

Description

NOTE: This product has been replaced by the AxCent™ family of servo drives. Please visit our website at www.a-m-c.com or contact us for replacement model information and retrofit instructions.

The 25A8 PWM servo drive is designed to drive brush type DC motors at a high switching frequency. A single red/green LED indicates operating status. The drive is fully protected against over-voltage, under voltage, over-current, over-heating and short-circuits across motor, ground and power leads. Furthermore, the drive can interface with digital controllers or be used stand-alone and requires only a single unregulated DC power supply. Loop gain, current limit, input gain and offset can be adjusted using 14-turn potentiometers. The offset adjusting potentiometer can also be used as an on-board input signal for testing purposes.

See Part Numbering Information on last page of datasheet for additional ordering options. The hardware installation manual for the analog drive family is available for download at www.a-m-c.com.

| Power Range | |
|--------------------|-------------|
| Peak Current | 25 A |
| Continuous Current | 12.5 A |
| Supply Voltage | 20 - 80 VDC |

Features

- ✓ Four Quadrant Regenerative Operation
- ▲ DIP Switch Selectable Modes
- ▲ Adjustable Current Limits
- High Switching Frequency
- ▲ Differential Input Command
- Digital Fault Output Monitor

- On-Board Test Potentiometer
- Offset Adjustment Potentiometer
- Adjustable Input Gain
- ✓ Drive Status LED
- Current Monitor Output
- Directional Inhibit Inputs for Limit Switches

MODES OF OPERATION

- Current
- Voltage
- IR Compensation
- Velocity

COMMAND SOURCE

±10 V Analog

FEEDBACK SUPPORTED

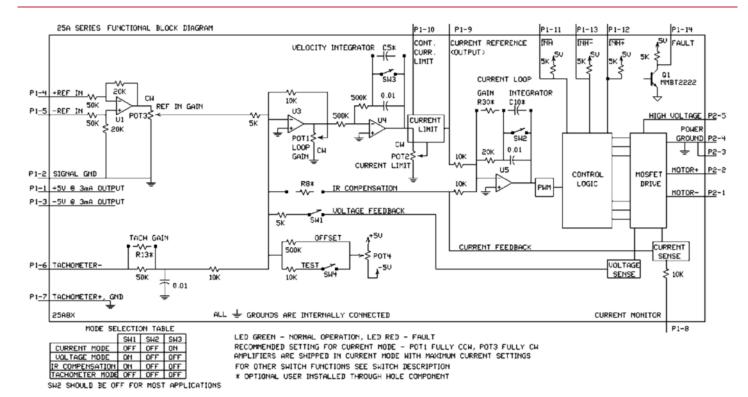

- Tachometer (±48 VDC)
- ±10 VDC Position

COMPLIANCES & AGENCY APPROVALS

- UL
- cUL
- CE Class A (LVD)
- CE Class A (EMC)
- RoHS

BLOCK DIAGRAM

| Information on Approvals and Compliances | | | | | |
|--|--|--|--|--|--|
| c FU °us | US and Canadian safety compliance with UL 508c, the industrial standard for power conversion electronics. UL registered under file number E140173. Note that machine components compliant with UL are considered UL registered as opposed to UL listed as would be the case for commercial products. | | | | |
| (€ | Compliant with European EMC Directive 2004/108/EC on Electromagnetic Compatibility (specifically EN 61000-6-4:2007 for Emissions, Class A and EN 61000-6-2:2005 for Immunity, Performance Criteria A). LVD requirements of Directive 2006/95/EC (specifically, EN 60204-1:2004, a Low Voltage Directive to protect users from electrical shock). | | | | |
| COMPLIANCE | RoHS (Reduction of Hazardous Substances) is intended to prevent hazardous substances such as lead from being manufactured in electrical and electronic equipment. | | | | |

SPECIFICATIONS

| Power Specifications | | | | | |
|---|------------|--|--|--|--|
| Description | Units | Value | | | |
| DC Supply Voltage Range | VDC | 20 - 80 | | | |
| DC Bus Over Voltage Limit | VDC | 86 | | | |
| Maximum Peak Output Current ¹ | Α | 25 | | | |
| Maximum Continuous Output Current | Α | 12.5 | | | |
| Maximum Continuous Output Power | W | 950 | | | |
| Maximum Power Dissipation at Continuous Current | W | 50 | | | |
| Minimum Load Inductance (Line-To-Line) ² | μH | 200 | | | |
| Low Voltage Supply Outputs | - | ±5 VDC (3 mA) | | | |
| Switching Frequency | kHz | 22 | | | |
| | Control S | pecifications | | | |
| Description | Units | Value | | | |
| Command Sources | - | ±10 V Analog | | | |
| Feedback Supported | - | ±10 VDC Position, Tachometer (±48 VDC) | | | |
| Commutation Methods | - | Brush Type | | | |
| Modes of Operation | - | Current, IR Compensation, Velocity, Voltage | | | |
| Motors Supported | - | Single Phase (Brushed, Voice Coil, Inductive Load) | | | |
| Hardware Protection | - | Over Current, Over Temperature, Over Voltage, Short Circuit (Phase-Phase & Phase-Ground) | | | |
| Primary I/O Logic Level | - | 5V TTL | | | |
| | Mechanical | Specifications | | | |
| Description | Units | Value | | | |
| Agency Approvals | - | CE Class A (EMC), CE Class A (LVD), cUL, RoHS, UL | | | |
| Size (H x W x D) | mm (in) | 129.3 x 75.8 x 25.1 (5.1 x 3 x 1) | | | |
| Weight | g (oz) | 280 (9.9) | | | |
| Heatsink (Base) Temperature Range ³ | °C (°F) | 0 - 65 (32 - 149) | | | |
| Storage Temperature Range | °C (°F) | -40 - 85 (-40 - 185) | | | |
| Form Factor | - | Panel Mount | | | |
| P1 Connector | - | 16-pin, 2.54 mm spaced, friction lock header | | | |
| P2 Connector | - | 5-port, 5.08 mm spaced, screw terminal | | | |

Notes

- Maximum duration of peak current is ~2 seconds. Peak RMS value must not exceed continuous current rating of the drive. Lower inductance is acceptable for bus voltages well below maximum. Use external inductance to meet requirements.
- 1. 2. 3. Additional cooling and/or heatsink may be required to achieve rated performance.

PIN FUNCTIONS

| P1 - Signal Connector | | | | | |
|-----------------------|--------------------|--|-----|--|--|
| Pin | Name | Description / Notes | 1/0 | | |
| 1 | +5V 3mA OUT | | 0 | | |
| 2 | SIGNAL GND | ±5 V @ 3 mA low power supply for customer use. Short circuit protected. Reference ground common with signal ground. | GND | | |
| 3 | -5V 3mA OUT | ground common with signal ground. | 0 | | |
| 4 | +REF IN | Differential Deference Input (140 V Operating Denge 145 V Maximum Input) | I | | |
| 5 | -REF IN | Differential Reference Input (±10 V Operating Range, ±15 V Maximum Input) | I | | |
| 6 | -TACH IN | Negative Tachometer Input (Maximum ±48 V). Use signal ground for positive input. | I | | |
| 7 | +TACH / GND | Positive Tachometer Input and Signal Ground | GND | | |
| 8 | CURRENT MONITOR | Current Monitor. Analog output signal proportional to the actual current output. Scaling is 4.4 A/V. Measure relative to signal ground. | 0 | | |
| 9 | CURR REF OUT | Measures the command signal to the internal current-loop. This pin has a maximum output of ±7.25 V when the drive outputs maximum peak current. Measure relative to signal ground. | 0 | | |
| 10 | CONT CURRENT LIMIT | Can be used to reduce the factory-preset maximum continuous current limit without affecting the peak current limit by attaching an external current limiting resistor between this pin and signal ground. See pin details for resistor values. | I | | |
| 11 | INHIBIT IN | TTL level (+5 V) inhibit/enable input. Leave open to enable drive. Pull to ground to inhibit drive. Inhibit turns off all power devices. | I | | |
| 12 | +INHIBIT IN | Positive Direction Inhibit (Does Not Cause A Fault Condition) | I | | |
| 13 | -INHIBIT IN | Negative Direction Inhibit (Does Not Cause A Fault Condition) | I | | |
| 14 | FAULT OUT | TTL level (+5 V) output becomes high when power devices are disabled due to at least one of the following conditions: inhibit, output short circuit, over voltage, over temperature, power-up reset. | 0 | | |
| 15 | NC | Not Connected (Reserved) | - | | |
| 16 | NC | Not Connected (Reserved) | - | | |

| | | P2 - Power Connector | |
|-----|----------------------------|--|------|
| Pin | Name | Description / Notes | 1/0 |
| 1 | -MOT | Negative Motor Output | 0 |
| 2 | +MOT Positive Motor Output | | 0 |
| 3 | POWER GND | Power Ground (Common With Signal Ground) | PGND |
| 4 | POWER GND | Fower Ground (Common with Signal Ground) | |
| 5 | HIGH VOLTAGE | DC Power Input | I |

Pin Details

CONT CURRENT LIMIT (P1-10)

This pin can be used to reduce the continuous current limit without affecting the peak current limit by connecting an external current limiting resistor between this pin and signal ground. See table below.

| Current Limit Resistor | OBOT OROB | OBIGHE ORGE | 65.006 GROD | EO EGO GOBO OMO DE OROB | COECO ECEO COOCH CROB | 6 Pt 4Bt 4B 4B | 00 00 00 00 00 00 00 00 | 03 03 03 03 00 50 F0 Po | 60 GOED OROD |
|--------------------------|-----------|-------------|-------------|----------------------------|--------------------------|----------------|----------------------------|----------------------------|-----------------|
| Continuous Current Limit | 90% | 80% | 70% | 60% | 50% | 40% | 30% | 20% | 10% |

Note: These values are secondary to the continuous/peak ratio set by the DIP switches.

HARDWARE SETTINGS

Switch Functions

| Switch | Description | Setting | | |
|--------|---|----------|--------|--|
| SWITCH | Description | On | Off | |
| 1 | Voltage feedback. Mode dependent (see mode selection table below). | On | Off | |
| 2 | Current loop integral gain. Activates or deactivates integration. OFF by default. | Inactive | Active | |
| 3 | Outer loop integration. Activates or deactivates integration. ON, by default, for current mode and OFF for other modes. | Inactive | Active | |
| 4 | Test/Offset. Switches the function of the Test/Offset pot between an on-board command input for testing or a command offset adjustment. OFF by default. | Test | Offset | |

Mode Selection Table

| | SW1 | SW3 |
|---------------------|-----|-----|
| CURRENT | OFF | ON |
| VOLTAGE | ON | OFF |
| IR COMPENSATION | ON | OFF |
| TACHOMETER VELOCITY | OFF | OFF |

Potentiometer Functions

| Potentiometer | Description Turning CW | | |
|--|--|-----------------|--|
| 1 | Loop gain adjustment for voltage/velocity modes. Turn this pot fully CCW in current mode. | | |
| 2 | Current limit. It adjusts both continuous and peak current limit while maintaining their ratio. | Increases limit | |
| 3 | Reference gain. Adjusts the ratio between input signal and output variables (voltage, current, or velocity). | Increases gain | |
| Offset / Test. Used to adjust any imbalance in the input signal or in the amplifier. Can also be used as an on-board signal source for testing purposes. Adjusts offset in negative direction testing purposes. | | | |
| Note: Potentiometers are approximately linear and have 12 active turns with 1 inactive turn on each end. | | | |

Through-hole Components[†]

| Location | Description |
|----------|--|
| C10* | Current Loop Integrator. Through-hole capacitor that can be added for more precise current loop tuning. See section below on Tuning with Through-hole components for more details. |
| C5* | Velocity Loop Integrator. Through-hole capacitor that can be added for more precise velocity loop tuning. See section below on Tuning with Through-hole components for more details. |
| R13* | Tachometer Input Scaling. Through-hole resistor that can be added to change the gain of the tachometer input. See section below on Tachometer Gain for more details. |
| R30* | Current Loop Proportional Gain. Through-hole resistor that can be added for more precise current loop tuning. See section below on Tuning with Through-hole components for more details. |
| R8* | IR Compensation Scaling. Through-hole resistor that must be added to configure the amplifier for IR Compensation mode. See section below on IR Compensation Notes for more details. |

Tachometer Gain

Some applications may require an increase in the gain of the tachometer input signal. This occurrence will be most common in designs where the tachometer input has a low voltage to RPM scaling ratio. The drive offers a through-hole location listed in the above table where a resistor can be added to increase the tachometer gain. Use the drive's block diagram to determine an appropriate resistor value.

Tuning With Through-hole Components

In general, the drive will not need to be further tuned with through-hole components. However, for applications requiring more precise tuning than what is offered by the potentiometers and dipswitches, the drive can be manually modified with through-hole resistors and capacitors as denoted in the above table. By default, the through-hole locations are not populated when the drive is shipped. Before attempting to add through-hole components to the board, consult the section on loop tuning in the installation notes on the manufacturer's website. Some general rules of thumb to follow when adding through-hole components are:

A larger resistor value will increase the proportional gain, and therefore create a faster response time.

A larger capacitor value will increase the integration time, and therefore create a slower response time.

Proper tuning using the through-hole components will require careful observation of the loop response on a digital oscilloscope to find the optimal through-hole component values for the specific application.

IR Compensation Notes

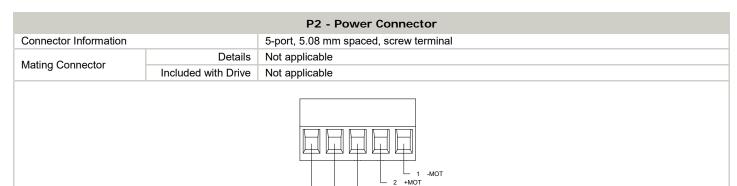

For applications that will use IR Compensation mode, a resistor must be added to the location named in the table above. The combination of the added resistor and correct dipswitch settings will configure the amplifier for IR Compensation mode. While in IR Compensation mode, the amplifier will adjust the duty cycle to compensate for changes in the output current. Consult the amplifier's functional block diagram and the manufacturer's website for more information.

[†]Note: Damage done to the drive while performing these modifications will void the warranty.

MOUNTING DIMENSIONS

PART NUMBERING INFORMATION

^{*} Options available for orders with sufficient volume. Contact ADVANCED Motion Controls for more information.

ADVANCED Motion Controls analog series of servo drives are available in many configurations. Note that not all possible part number combinations are offered as standard drives. All models listed in the selection tables of the website are readily available, standard product offerings.

ADVANCED Motion Controls also has the capability to promptly develop and deliver specified products for OEMs with volume requests. Our Applications and Engineering Departments will work closely with your design team through all stages of development in order to provide the best servo drive solution for your system. Equipped with on-site manufacturing for quick-turn customs capabilities, ADVANCED Motion Controls utilizes our years of engineering and manufacturing expertise to decrease your costs and time-to-market while increasing system quality and reliability.

Examples of Modifications and Customized Products

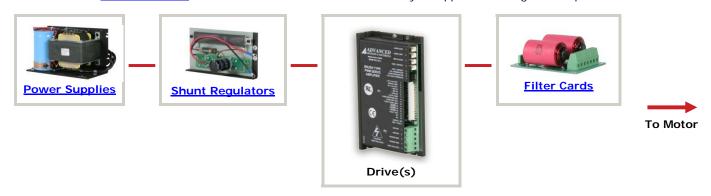

- ▲ Integration of Drive into Motor Housing
- ▲ Mount OEM PCB onto Drive Without Cables
- ▲ Multi-axis Configuration for Compact System
- ▲ RTV/Epoxy Components for High Vibration
- OEM Specified Connectors for Instant Compatibility
- OEM Specified Silkscreen for Custom Appearance
- ✓ Increased Thermal Limits for High Temp. Operation
- ▲ Integrate OEM Circuitry onto Drive PCB
- Custom Control Loop Tuned to Motor Characteristics

- Optimized Switching Frequency
- ▲ Ramped Velocity Command for Smooth Acceleration
- ▲ Remove Unused Features to Reduce OEM Cost
- ▲ Application Specific Current and Voltage Limits

Feel free to contact Applications Engineering for further information and details.

Available Accessories

ADVANCED Motion Controls offers a variety of accessories designed to facilitate drive integration into a servo system. Visit www.a-m-c.com to see which accessories will assist with your application design and implementation.
